## HEALTH INNOVATION IMPLEMENTATION AND IMPACT

A functional training program on how to implement sustainable change in the health care system on a clinical level

To improve our provision of care, we need to devise a more efficient and sustainable healthcare system. Then it is essential to be able to implement change and monitoring the outcomes, and at the same time, numerous studies show that implementing the proposed changes in a health care setting remains fragmented, inconsistent and not efficient. Hence, there is a substantial need for the development of a training program in the healthcare sector that facilitates the process of implementing change in an efficient and structured way as well as being cost-efficient.
